

Workplace Sensor Software

Make your sensors and Office 365 work seamlessly together.

Create a Smart Office with Sensor-Controlled Workspace and Office Management

Our new sensor software solution works with a variety of occupancy sensor and workplace sensor products to enable your sensor solutions to work together with Office 365. Automate workspace check-ins, cancellations and no-shows. Expedite meeting room turnover and cleanings. Get a clearer picture of employee workspace usage and behaviors.

Leveraging the Wi-Fi network and Microsoft Power BI, our software lets room or desk sensor's API communicate within the Microsoft Office 365 to give you smarter insights and capabilities for workspace and office management.

Why Choose Our Sensor Software?

Our sensor software solution focuses on integration with Microsoft Office 365 to enable more insights around resource use and greater management functionality.

By focusing on integration with Office 365, we enable you to create smart, tech-driven operational efficiencies and automations that can reduce overhead costs and resource waste.

Discover a Better Workspace and Hot Desking Experience

Want to learn more about how our sensor software solution can connect your sensor solutions with Office 365 for more efficient and accurate workspace management?

TECHNICAL REQUIREMENTS

With our sensor software solution, the technical requirements are simple, allowing more organizations to bridge together their key resource systems. To leverage Add-On Products' Sensor Software, the following are necessary.

- ✓ A cloud-based Microsoft Office 365 solution.
- ✓ The utilized sensor vendor must have an official accessible API.

Workplace Sensor Software

Make your sensors and Office 365 work seamlessly together.

Key Functionalities

Our sensor software solution runs within our OfficePlace suite, integrates with Office 365 and filters data to adapt and handle various business scenarios. No more unnecessary administrative work to correctly see desk and meeting room availability.

Instant Meeting Booking

Book a meeting when walking into an available room. Meeting room occupancy sensors will communicate to the Office 365 resource and let employees instantly book the room they walked into if it's open and free.

Automated Confirmations & Check-Ins

Movement within a meeting room or on/near a reserved desk will activate the desk sensor and enable Office 365 to confirm the workspace booking. Simplify and expedite room and space check-ins simply by showing up.

Smart Cancellations

Never waste workspaces again. If movement is not detected by a sensor on a desk after a while (customizable period), the workspace reservation will be cancelled. The space will then appear open for other employees to book or just sit down at the free desk.

Adaptable Check-Outs

End meetings early or extend a room reservation. The sensor can smartly detect a lack of occupancy or prolonged occupancy and end or extend the meeting room booking.

Understand No-Show

Weekly or monthly, run a no-show report to understand if employees are misusing the booking system and resources. Our Microsoft BI-powered OfficePlace Insights will enable you to identify misuse and adjust procedures accordingly to help save on costs and reduce waste.

Smarter Resource & Service Management

Associated resources and services are cancelled when movement is not detected. Service suppliers are notified if an item or service is no longer needed and can either not provide the service or proceed to clean up the room for faster turnover.

Flexible Bookings

Real-Time View of Available Workspaces

Always know what workspaces and resources are open or booked and simplify employee workspace management.

When a sensor registers movement, the workspace or room will appear closed on **Resource Central, Workspace** and **in-office booking system screens**. Occupied spaces will appear red. The converse is also true.

Workspaces where no movement is detected will appear green, or available. Workspace that gets automatically cancelled due to no-shows will update in real-time from red to green.

Flexible Bookings and No-Worry Cancellations

Many of today's organizations have transitioned to a hybrid workplace model. Instant movement-activated bookings enable last-minute flexibility for employees. And sensor-informed no-show reservation cancellations can ensure workspaces are never wasted.

If an employee forgets to cancel a hot-desk reservation, no worries. The reservation will terminate automatically when no movement is detected. The **Workspace app** and any **on-site booking screens** will then update in real-time to show the workspace as available.
